

Dario Cagliano
Manager of the Secondary Operations Department of
Agrati S.p.a.
www.agrati.com

We use Sala machines to manufacture complex and high-precision components, both in terms of dimensions and finish.

Our production had a complex component to machine, which involved the use of different machines for turning, drilling, smearing, etc.
We conducted market research to find a machine that could carry out all the processes required.

And we found out how the T2 Line was perfect for our requirements.
With just one passage we are able to carry out all the processes required, thus reducing production and processing costs.

We are using different types of machines (lathes, transfers, etc.) and we are really happy with the results.
Our Sala machine allowed us to extend our range of products and add value to our production.

What we like about Sala machines is their compactness, sturdiness, and ease of use.

Sala personnel is extremely competent and available for whatever you need.

We've been collaborating with Sala S.r.l. since 2012.

Sala machines ensure: EFFICIENCY, meaning reduced time for the product to cross the plant.

All the processes that needed 7 passages and as many plants are now carried out by the T2 Line.

And the following other advantages:

- Easy of use
- Low service costs
- Excellent consultancy and support service.
-

I would recommend Sala S.r.l. to those who need a lathe capable of carrying out different processes at the same time but cannot afford a multi-spindle. Plus, with Sala, S.r.l. it's easy to establish a business relationship based on trust and cooperation.
