

Werner Ryser
Technical Manager at SFS Intec AG
www.sfsintec.biz

We use Sala machines to manufacture vehicle components.

The machine's project has convinced us for its flexibility. We were forced to find a better solution compared to the existing one, as we needed to further expand our production capacity.

Our relationship with Sala has always been extremely positive.

The old production lines consisted of multi-spindle machines, but the many issues we had to face led us evaluate Sala's offer, which ensured great flexibility thanks to the use of 4 fully independent spindles.

And Sala responded with excellent technical and business solutions.

Even their after-sales service is efficient, as they quickly answer to our questions.

We've been collaborating with Sala S.r.l. since 2014.

Sala machines allowed us to:

- be more competitive on the market**
- improve process stability**
- have unsupervised work shifts**
- ensure greater flexibility**

Other benefits are: accessibility for set up and tool adjustments and ease of chip ejection.

One of their biggest strengths is the price/machine performance ratio.
