With this machine, we manufacture high quality balls used in ball valves with gas or liquids.

We saw a Sala machine by chance in a production plant and we were enthusiastic about the project. Then, in Brescia, we had the chance to see the project on a modern machine, which convinced us to choose a Sala machine.

We also researched other solutions, which did not convince us.

Sala machines ensure: accessibility, also for maintenance purposes; a tidy work environment; easy programming; an easy-to-use interface; quick tooling.

Service: we get quick responses and excellent tips also for new projects. No matter the problem, even if it is technical, we immediately get a direct contact.

We've been collaborating with Sala since 2013.

Sala also helped us achieve the following results: high production volumes; long lasting-equipment and tools; no leaks; ease of use; efficient loading and unloading operations.

I highly recommend Sala, no doubt about that.

Sundwiger.
